Currently taking the course of computer science on my 4th year in University of the East, I am experienced technically when it comes to computer related projects from code programming to graphical designing. Skilled in using Adobe premiere pro and Photoshop for editing, and Python, C++, HTML, CSS and JavaScript language for programming but can also be flexible when using other applications and language. As I am experienced in dealing with people from being a staff at a cosplay event, I can work with teams with ease if needed while maintaining my time schedule for both work and school requirements
